

Interested in Clinical Research?

What is clinical research?

Clinical research is the part of healthcare where new treatments are investigated for the prevention and treatment of diseases.

Benefits of participating in research

Research participants receive quality healthcare at no cost during their participation and are compensated for their time and travel while being involved in a trial. Treatment may include new treatment for a disease before it is available to everyone.

Importance of Clinical Research

Your participation helps find new and better ways to detect, treat, and prevent disease because clinical research allows scientists to determine which treatments are effective and safe.

If you are interested in participating in research, please circle which indications you would be interested in participating in and being contacted for:

Tampa:

- Hidradenitis Suppurativa
18-65 Years
